TEETH WHITENING SYSTEM

Brilliantly Simple. Simply Brilliant.

Here's how it works. LED Blue Light Technology is calibrated to a precise wavelength, activating White Pearl's pharmaceutical-grade whitening gel. The whitening process quickly begins, removing years of discoloration. Coffee,

tobacco, cola and red wine stains —

White Pearl will remove them all and

leave behind a brilliant, white smile.

With White Pearl, there is no irritation or burning, and little-to-no tooth sensitivity. Because we offer this innovative service through spas, health clubs and salons, the high cost associated with dental office visits is not a factor — in fact, White Pearl is a fraction of the cost. Plus, the treatment is administered by trained professionals and is totally safe.

questions?

Is White Pearl for everyone?

Just about anyone! White Pearl yields amazing results for anyone who wants whiter teeth. This includes those with teeth stained by tobacco, foods, coffee or tea. However, pregnant women and children under the age of 16 should not use the system.

How white will my teeth get?

Tests show that after just one 10-20 minute White Pearl session, teeth can become 3-10 shades whiter. Of course, these results depend on original tooth color. In some cases, a second treatment is recommended.

How long will my whitening results last?

This varies from person-to-person, and also depends on dental hygiene. White Pearl treatment results typically last for up to two years.

Is it safe?

Yes. Scientific articles have shown that the active ingredients in the White Pearl gel are safe and effective for cosmetic tooth whitening.

How long does the White Pearl treatment take?

Incredible results are achieved in just one 10-20 minute treatment!

Will it hurt?

Absolutely not! Because of White Pearl's state-of-the-art technology, treatment time is very brief. This means that exposure to strong, sensitivity-causing bleaching agents for long periods of time is a thing of the past. Although hot and cold foods should be avoided for a few hours after treatment, discomfort or sensitivity is generally not an issue.
